Experience in the treatment of 20 patients is reported. Twelve of these patients had previously been treated with sulfones, to which most had been intolerant. A daily beginning dose of 500 mg was increased by 500 mg each week to a maximal dose in some cases of 3 g. Tolerance was good. The patients not previously treated showed best results (flattening and absorption of the lepromata, regression of infiltration of plaques, regression of spots). Case histories are included.
